Enhance Color, Improve Packout and Accelerate Early Fall Defoliation

ProTone® SG Plant Growth Regulator Soluble Granule is proven to help red table grape growers enhance color for a greater packout and more flexible harvest without compromising quality. *ProTone* is ideal for use in Flame seedless, Crimson seedless and Red Globe varieties.

For nurseries, *ProTone* can speed the fall defoliation in fruit and vines allowing for earlier digging of the nursery.

- ▶ Enhances red grape coloration for earlier harvest
- ▶ Improves grape color uniformity and packout yield
- ▶ Accelerates fall defoliation in fruit and vines
- ▶ *ProTone* is NOP compliant and OMRI Listed for organic production

Tulare County, California

How To Use

Rate & Timing	<p>Apply 13.2–44.1 oz (375–1,250 grams) per acre within the period from 1 week before veraison (50 percent of the target fruit has softened) until anticipated harvest of target fruit</p> <ul style="list-style-type: none"> • Early timing: First application should be made between 1 week before veraison and 3 weeks after veraison • Late timing: If additional color development is desired, up to three applications can be used. Multiple applications are expected to improve color on cultivars for which there is an extended period between veraison and harvest. <p>Acceleration of leaf senescence and abscission*: Apply 16.5–66.1 oz (469–1,875 grams) per acre per application. Make one to two foliar applications in combination with other defoliating materials in late fall before the onset of dormancy when defoliation is required. Allow 7–14 days between applications to observe the effect of the first application.</p>
Method	Direct spray to fruiting zone
Spray Volume	80–200 gallon/A
Conditions	<ul style="list-style-type: none"> • Apply during the cooler parts of the day or night; avoid the hottest period of the day • Apply under slow drying conditions, e.g., early in the morning, in the evening or night (coolest daily temperatures, medium to high relative humidity, and no wind) • Do not make applications during the day or early evening when the fruit is still hot
Adjuvant	Use a non-ionic surfactant at the final surfactant concentration directed by the surfactant manufacturer to improve wetting and coverage of grape bunches
REI	4 hours
PHI	0 days

*Not for use in California
